

Single Shaft Crusher design

The Design of shape, material of construction, spacing / gap, Sizes, capacity, power all depends upon the type of material to be crushed.

The Basic Characteristics to decide the type of Crusher Selection

- Type of Material Physical properties, hardness, breaking power, adhesiveness
- Size of Input lumps & output size desired
- Crushing capacity Capacity per Hr. In Cubic meters.
- Temp. Rise during crushing / Chemical properties change during crushing
- Dust generation during crushing
- Close loop / Close Circuit Processing
