

Car simulator tool which provide car technicians to diagnose electrical problems without having a car. This tool acts as a virtual car simulator that allows the technician to connect various electrical systems of a car like ECM, Speedometer, Key, etc. Once the faulty electronic systems are connected with each other, they can be diagnosed easily and can be check without a physical car present. This tool reduces the hassle of going to car each and every time for diagnosing every single problem at a time. Using this tool you can diagnose every problems and rectify them without the need of a car. This will reduce your work and your time. A perfect tool to efficiently diagnose car problems without having a car !
