Serie

La serie AIR-Hy è composta da un'ampia e ben diversificata gamma che comprende soluzioni per le più svariate esigenze installative:

- 10 grandezze di potenza
- 3 configurazioni di installazione
- versione 2 e 4 tubi
- versione con mobile a vista verticale
- versione con mobile a vista orizzontale
- versione ad incasso verticale
- versione ad incasso orizzontale
- motore ECM o asincrono
- ampia gamma di controlli a corredo
- performance certificate EUROVENT
- certificazione igienica VDI 6022

The AIR-Hy series consists of a wide and well-diversified range that includes solutions for all types of installation needs:

- 10 sizes of capacities
- 3 configurations of installation
- 2 pipes and 4 pipes system
- with cabinet for vertical installation
- with cabinet for horizontal installation
- vertical concealed type
- horizontal concealed type
- centrifugal ECM or asynchronous motor
- wide range of controls
- performance EUROVENT certified
- hygienic certified VDI 6022

Questione di comfort, questione di sicurezza *Matter of comfort, matter of feel safer*

La garanzia di un clima ideale e salubre all'interno degli ambienti, che assicuri comfort e sicurezza, favorendone il benessere psicofisico dell'individuo, migliorandone salute, rendimento e capacità di concentrazione, sono oggigiorno aspetti di primaria importanza. Una gestione opportuna dell'aria negli ambienti in cui viviamo non solo in termini di gradiente termico ma anche in termini di purezza, rappresenta un aspetto vitale per garantire il benessere degli occupanti ed assicurare un eccellente mantenimento delle condizioni di salute.

Mekar, con questa nuova serie di fan coil certificati, ha voluto dare una risposta concreta all'aspetto primario della sicurezza dell'utente, progettando e sviluppando una gamma dedicata di unità atte a **garantire condizioni igienico sanitarie di elevato standard**, con molteplici versatilità in campo applicativo, che spaziano dalle applicazioni più comuni quali uffici, scuole, palestre, SPA e luoghi comuni in genere al fine di poter offrire un ambiente più salubre e sicuro, fino ad applicazioni più sensibili quali ospedali, cliniche, industrie alimentari e farmaceutiche in cui devono essere garantiti livelli di igiene assoluti.

L'introduzione di soluzioni tecnico-costruttive innovative, l'utilizzo di materiali inossidabili e polimeri d'avanguardia testati secondo DIN EN ISO 846 e capaci di inibire la proliferazione batterica, hanno permesso la realizzazione di due serie di unità conformi ai parametri imposti dalle linee guida VDI 6022, sempre più riconosciute a livello europeo come punto di riferimento per la progettazione di luoghi pubblici innovativi in cui debba essere assicurato un'eccellente livello di igiene e comfort, per il totale benessere delle persone.

The guarantee of an ideal and healthy climate inside the rooms which ensures comfort and safety, favoring the individual's psychophysical wellbeing, improving their health, performance and concentration, are today aspects of primary importance. Appropriate air management in the environments in which we live not only in terms of thermal gradient but also in terms of purity is a vital aspect to ensure the well-being of the occupants and ensure excellent maintenance of health conditions.

Mekar with this new series of certified fan coil wanted to give a concrete answer to the primary aspect of user safety, designing and developing a dedicated range of units designed to guarantee high standard sanitary conditions with multiple versatility in the field applications ranging from the most common applications such as offices, schools, gyms, SPAs and common places in order to offer a healthier and safer environment to more sensitive applications such as hospitals, clinics, food and pharmaceutical industries where absolute levels of hygiene must be guaranteed.

The introduction of innovative technical-constructive solutions, the use of stainless materials and cutting-edge polymers tested according to DIN EN ISO 846 and capable of inhibiting bacterial proliferation have allowed the realization of two series of units complying with the parameters set by the guidelines VDI 6022, increasingly recognized at European level as a reference point for the design of innovative public places where an excellent level of hygiene and comfort must be ensured for the total well-being of people.

Comfort design e benessere,
nella massima silenziosità e sicurezza

*Comfort design and well-being,
in maximum silence and safety*

Questione di risparmio e di rispetto per l'ambiente

Matter of saving and respect for the environment

La serie AIR-Hy, può essere equipaggiata anche con un innovativo motore sincrono di tipo Brushless controllato da una scheda inverter dedicata, che consente di modulare con accurata precisione la velocità del gruppo ventilante, limitando l'apporto energetico all'effettivo carico di lavoro richiesto, senza inutili sprechi.

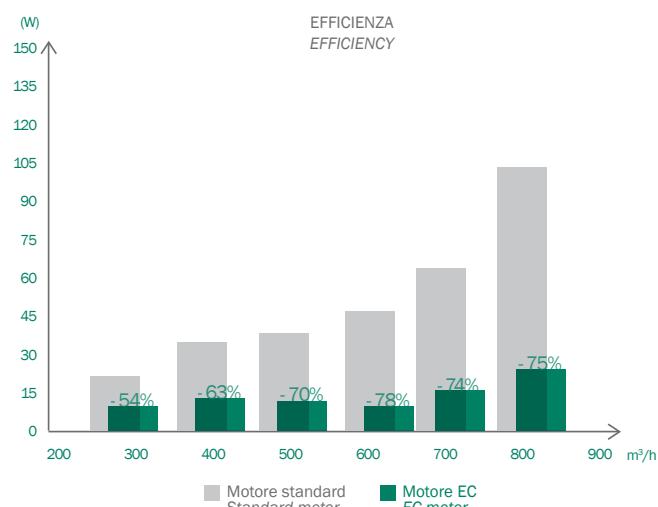

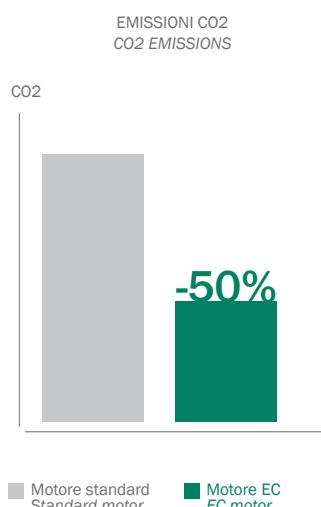

Rispetto ad una unità con motore tradizionale asincrono, il motore EC assicura una eccezionale riduzione dei consumi energetici di oltre il 75%, anche durante il funzionamento a basso numero di giri.

Oltre a consentire un notevole risparmio sul piano economico e relativa diminuzione delle emissioni di CO2 in ambiente, la versione con motore EC è in grado di migliorare sensibilmente il comfort ambientale attraverso una variazione costante della portata dell'aria, a beneficio di un immediato e preciso raggiungimento del carico termico richiesto dall'utente e del suo mantenimento durante tutto l'arco della giornata e di una maggiore silenziosità garantita da una gestione mirata del numero di giri

The AIR-Hy series can also be equipped with an innovative brushless synchronous motor controlled by a dedicated inverter board, which allows to modulate with accurate precision, the speed of the fan limiting the energy supply to the actual workload required, without unnecessary waste.

Compared to a unit with traditional asynchronous motor, the EC motor ensures an exceptional reduction of energy consumption by more than 75%, even during the operation at low rpm. As well as bringing considerable savings in economic terms and relative decrease.

of CO2 emissions in the environment, the series with EC motor is able to significantly improve the environmental comfort through constant modulation in air flow rate, with the benefit of an immediate and precise achievement of the thermal load required by the user and its maintenance throughout the day and greater noiselessness guaranteed by a targeted management of the number of revolutions.

Test - certificate

hygiene – conformity check to the design requirements of VDI 6022, part 1 (01/2018)

Test institute:

Hygiene Institut des Ruhrgebiets
Institut für Umwelthygiene und Toxikologie
Rotthauser Straße 21
49879 Gelsenkirchen

Test object:

fan coil units "AIR"

Manufacturer:

Ventilclima
Via Montegrappa, 67
31020 San Zenone degli Ezzelini (Tv)
Italy

Basis of the examination:

✓ VDI 6022, part 1 (01/2018)
✓ SWKI VA104-01 (04/2006)

Validity period:

5 years 02/2018 – 02/2023

Test report:

W-294683-18-WD

In conclusion it can be stated that the examined fan coil unit „AIR“, as specified in the test report W-294683-18-WD, is in compliance with the design requirements of the above mentioned regulations.

(Priv.-Doz. Dr. G.-J. Tuschewitzki)
Head of the Department of Water
Hygiene and Environmental
Microbiology

(F. Wedke B. Eng.)
Administrator of Air Conditioning technology
Department of Water
Hygiene and Environmental Microbiology

issued 09.02.2018, Gelsenkirchen

Within the framework of the conformity check the hygiene-relevant requirements of the above mentioned regulations was examined. Requirements of other regulations that refer to the above mentioned regulations were not part of the examination. Additionally, the conformity check does not include a toxicological or sensory testing of the introduced materials. This document is not part of a certification process.
