

The **infrared (IR) thermometer** provides fast, accurate and safe non-contact measurement. The measurement takes place at a distance of 3–5 cm from the body or the object being measured. The device has a readable, backlit liquid crystal display with three backlight colors (green, yellow, red), each assigned to a different temperature level. When high temperature is detected, the device will signal with a sound signal. The thermometer has a built-in memory for the last 32 measurements and the ability to display the temperature in degrees Celsius or Fahrenheit. After a long period of inactivity, the device will automatically turn off to save battery.

The key feature are following:

- 3-5 cm distance
- Memory storage
- Large readable display
- Beep when high temperature is detected
- Automatic shutdown to save battery
- Two measurement scales to choose from Celsius or Fahrenheit
