

non-contact:  
measuring the forehead  
of the human body,  
not touching

The **Infrared (IR) thermometer** provides fast, accurate, FDA approved and safe non-contact measurement. The measurement takes place at a distance of 5 - 15cm from the body or the object being measured. The thermometer has a built-in memory for the last 32 measurements and the ability to display the temperature in degrees Celsius or Fahrenheit.

The device has a readable, backlit liquid crystal display with three backlight colors (green, yellow, red), each assigned to a different temperature level. When high temperature is detected, the device will signal with a sound signal. After a long period of inactivity, the device will automatically turn off to save battery.

The key feature are following:

- 5-15 cm distance
- 32 Memory storage
- Large readable display
- Beep when high temperature is detected
- Automatic shutdown to save battery
- Two measurement scales to choose from Celsius or Fahrenheit
