

PALLET SUB-TABLES

These sub-tables are used on original pallets of NC-CNC machining centres to protect the pallet surface. They allow provision of ready fixtures for tooling-up and minimise loss of operating time. They can also be used as sub-plates to provide larger space for work-setting. These are provided with T-slots and/or Tapped holes and are made to suit Horizontal Machining Centres having Pallet size 400x400 mm to 1000x1000 mm. These can also be made to suit specific requirements.
