

KnK Barrier-cuda
By Visions Concepts Realities Pvt. Ltd

A circular logo containing the letters 'KnK' in a white, blocky font with a grey shadow effect. The circle has a thin black border.

KnK

Modernize your track in a quick and dramatic way!!

Another product from KnK Karts the 'Barrier-cuda'

A linkable barrier system that tidies up your karting track by replacing tyre barriers that are unsightly.

The Barrier-cuda barrier system offered by us is manufactured using the finest materials to ensure proper working and longevity.

These barriers are suitable for dirt karting tracks, rental go karting tracks, racing tracks & other applications.

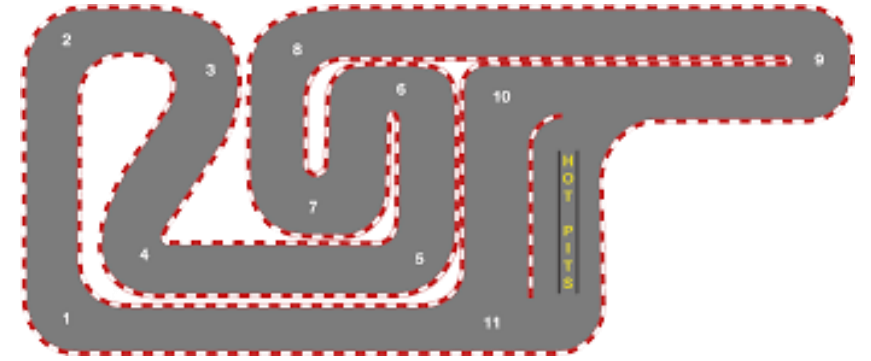

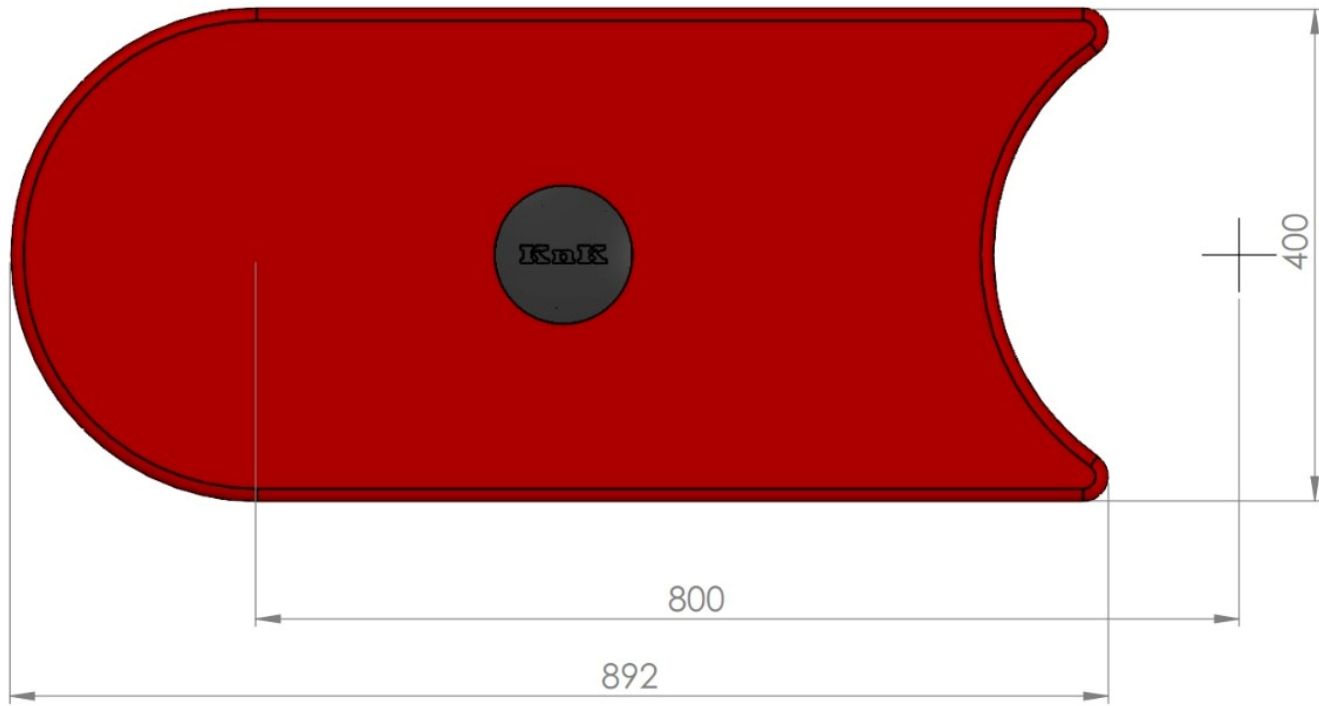

The Barrier-cuda can be ordered in different strengths (weight) and personalized colors as per the client's requirements. They are quick and easy to assemble and reposition depending on changes to the track layout.

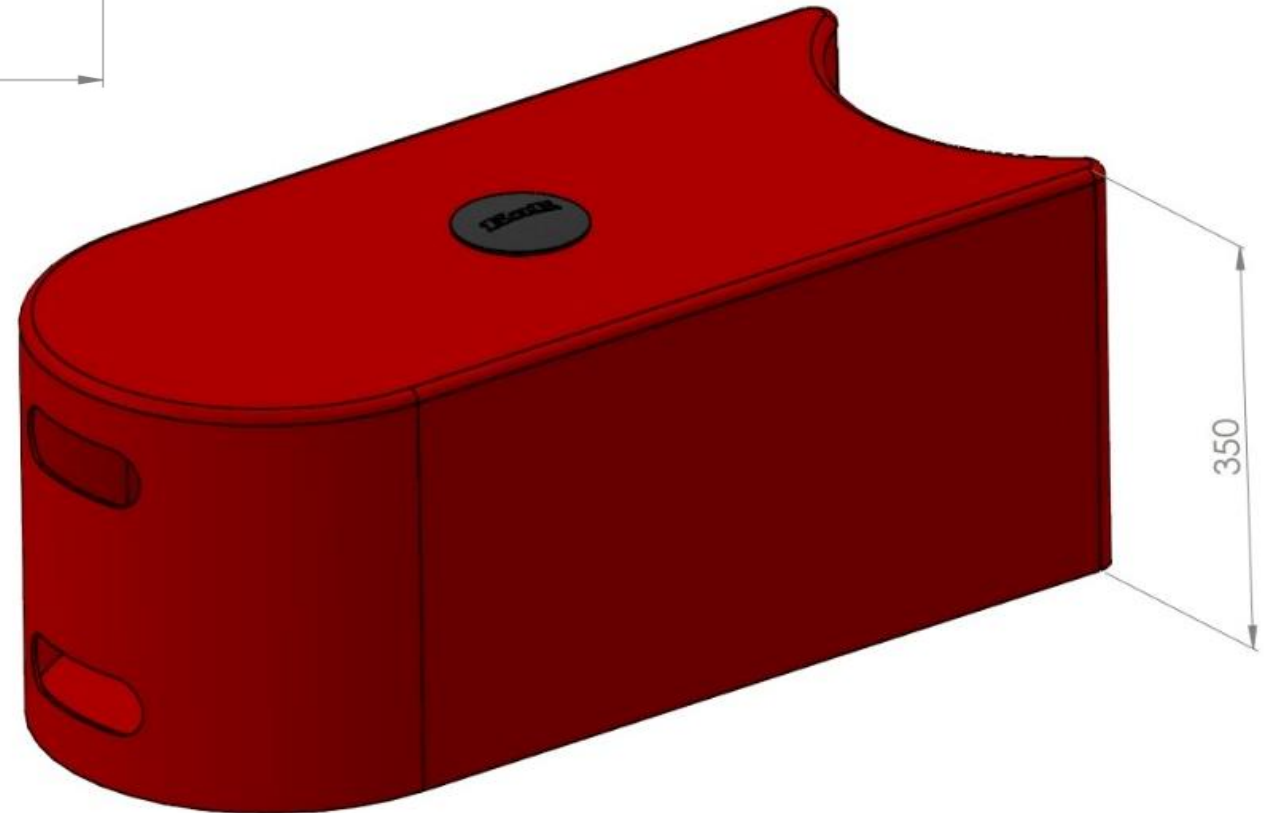

•There are lots of advantages with using the Barrier-Cuda trackside barrier system – made from UV stabilized, splinter-proof impact resisting, flexible molded plastic. It offers safe displacement and prevents “bounce-back” of a kart into the path of other karts, the impact resistance can be adjusted by increasing or decreasing the ballast in each individual barrier. Hard, low friction deflector plates are available as optional extras to fit to barriers at accidents prone sections of the track, to improve safety and strength.

•Barrier interlinking permits lengths of barrier chains to be adjusted to suit the track and conditions. It is completely sealed and does not retain water, so mosquitos don't have a place to breed in it. It lends an appealing colorful and neat look to the track, different color barriers are available on special request. The flat sides provide an attractive place to display advertisements of sponsors.

**Barrier-cuda are
Available in different
colors, weight &
strength.**
