

Some benefits why to use safeflor instead of Bubble guard as a tile protector

Description	Bubble guard	Safeflor
Usage	One time use becomes costly	Economical and Reusable
Structure	Short sheets contains air bubble	Long five layered Sheet
Application time	Lengthy for tapping as too many joints.	Fast less tape required as joints are less
Protection between tiles and sheet	It has hard surface and can scratch tiles from inner dust particle	It has soft surface cannot scratch tiles but sustains impact of inner dust particle
Protection after application	Limited floor protection. It make permanent mark of bubbles on tiles.	Complete vertical and horizontal protection. No marks after usage.
Health	Dust appear from too many joints It is a slippery material.	Healthy and clean atmosphere as less joints. Skid free and anti slippery material.
Skill	Only skill worker can do application	Do application yourself
Maintenance	As joints are more needs to tape frequently	One time application for floor protection
Durability	Made from air bubble which cannot comes in original shape once air comes out after compression. Easy tear able and not scratch resistance. Too many joints cannot durable until site completes	Made from filled polymer Comes in original shape after compression Highly scratch and tear resistance. Less joints keeps site clean and tidy.
Tear from holes and scratches	It can get tear vertical once scratched	Cannot tear vertical or horizontal as it has a cress cross layer. And can easily tape at scratch and holes.
Salvage Value	Less as aired.	Good value after multiple use
Appearance	Sheet form	Roll form each roll comes in packing
Handling	Sheet form many labor required	Roll form light weight easy to carry many rolls.
Use in sky scraper	Requirement on each floor	Reuse it from one to another
