

RealmSafe

Environmental Health and Safety (EHS) Management Specifically Designed for Academic Institutions

The world is demanding, unforgiving and resources limited. RealmSafe is specifically designed to meet the increasing requirements placed on primary, secondary, and higher education. Managing risk for environmental health and safety demands a no-compromise, full featured software application with support by a dedicated organization.

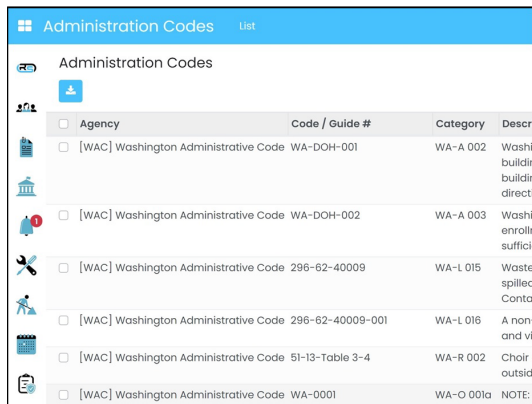

Regulatory Compliance Management:

Regulatory requirements and recommendations are built directly into the software and applied to the work process. Administrative requirements include local, state and federal guidelines. These regulatory requirements are updated continuously allowing our customers to focus their time on more important items.

www.RealmSafe.com

Mitigating Legal Litigation Cost: All events from notifications, EHS work tasks, preventative, and corrective actions are stored. With a complete historical paper trail, districts can easily demonstrate compliance and work history. A paper trail includes files, photos, video and internal messaging.

Insurance Compliance and Reimbursement Processing: Submitting reimbursement request, retrieving historical documentation, and submittals are all easily printable. All compiled documentation and reports can be digitally searched.

EHS Notifications and Communication Messaging:

All activity can be easily captured as a notification such as spills, accidents, falls and storm damage. Notifications are indexed, alarmed, and corrective work tasks implemented within one system. These corrective work tasks are tied to specific regulatory requirements and guidelines. This process is aided with communication messaging and push notifications.

Work orders marked: Yearly Inspection - Gym (June 30), test work request 01 (June 1), test 0a (June 14).

Site Awareness: Site Awareness is a digital storage section providing easy access for district wide or school specific documentation. Examples include storage for drinking water yearly laboratory results, yearly fire inspection documents, and district wide policy / procedures. Site Awareness allows grouping of documents such as PDF and media. Acknowledgement reminders, push notifications and email distributions are all available.
