Cattle & Poultry

Cattle & Poultry Cooling

The Hydromist Cooling System uses atomized water droplets to "Flash Cool" the hot, stale air in your barn or run-in shed. It doesn't just move the hot air around, it Keeping your Cow, horse or livestock (Poultry) cool and comfortable during the summer is absolutely vital. When high ambient temperatures and humidity combine, body heat may accumulate faster than your cow; horse can get rid of it. The fact is, they are better at keeping themselves warm than cooling themselves off. You can help your cow, horse or livestock keep cool by using the Hydromist cooling system cools and conditions it. This can help your animals avoid heat-related threats like hypothermia, muscle tremors or weakness. Livestock achieve their best growth rate when they are kept at their ideal temperature. Keep extreme temperatures under control with an automatically controlled high pressure fogging system for best results?
