

Clarion Make CRB Series Horizontal - Ribbon Blenders

Ribbon Blender comprises of a U-shaped horizontal trough and a specially designed (as per application) Double Helical Ribbon Agitator rotating within. Ribbon Blenders are based on a proven agitator construction that provides a triple mixing action ensuring fast, efficient blending. The dimensions and configuration of the ribbons are carefully balanced to provide a movement of material within the container that avoids dead spots, thorough mixing of products and gives rapid product discharge.

An alternate design is the paddle agitator. The paddles are positioned to move the material in opposing lateral directions as well as radially. The paddle design is generally employed where friable materials are being blended, and when batches as small as 15-20% of the total capacity are going to be mixed in the blender.

Advantages of CRB Series Horizontal - Ribbon Blenders

- 1- Effective Blade Design, acheive better mixing results
- 2- Available in SS or MS steel of construction
- 3- capacity range from 40 ltrs to 9000 Itrs working volume

- Available in Water cooled jackets for heat sensative products.
- 5-Custome made solutions can be possible.
- 6-Easy cleaning complete drain Possible special deisgn due blades

- 7- Variety of dry Powders can processed with single machine.
- 8- Blades can be cganged for different types of applications
- 9- Can be fitted with on line with other machines to optimise the process.

Important Note: Working capacity may vary between 60 to 80 % (also depends upon the type of products its density, flowability, physical status, etc.) of the total capacity mensioned above. The Change in design may be possible as compaired with data specified in above table, as a part of continual improvement process.
