

# MEASUREMENT BUOY MB90-A / MB90-B

TriTech

**Measurement Buoy** is a quick-deployment system for the measurement of surface water quality.

Also available is an inter-changeable long sensor-protection housing for deployment of 2 multi-parameters probes in tandem (i.e. one near surface and the second at configurable depth).

The buoy is equipped with self sustainable solar-powered system and wireless-enabled controller, for upload of real-time measurement data. The light-weight and modular design allow quick field assembly, easy transportation and deployment.

## System Features

- Fully automated for in-situ surface water quality
- Quick deployment and high mobility, easy for multiple sites monitoring
- Designed for ease-of-use
- Standard parameters (Temperature, pH, DO, Conductivity, Turbidity, NH<sub>4</sub>-N and COD) with option parameters (Chlorophyll a, BG Algae, NO<sub>3</sub> and TOC)
- Independently powered by solar with low power design
- Suitable at rivers, lakes or reservoirs
